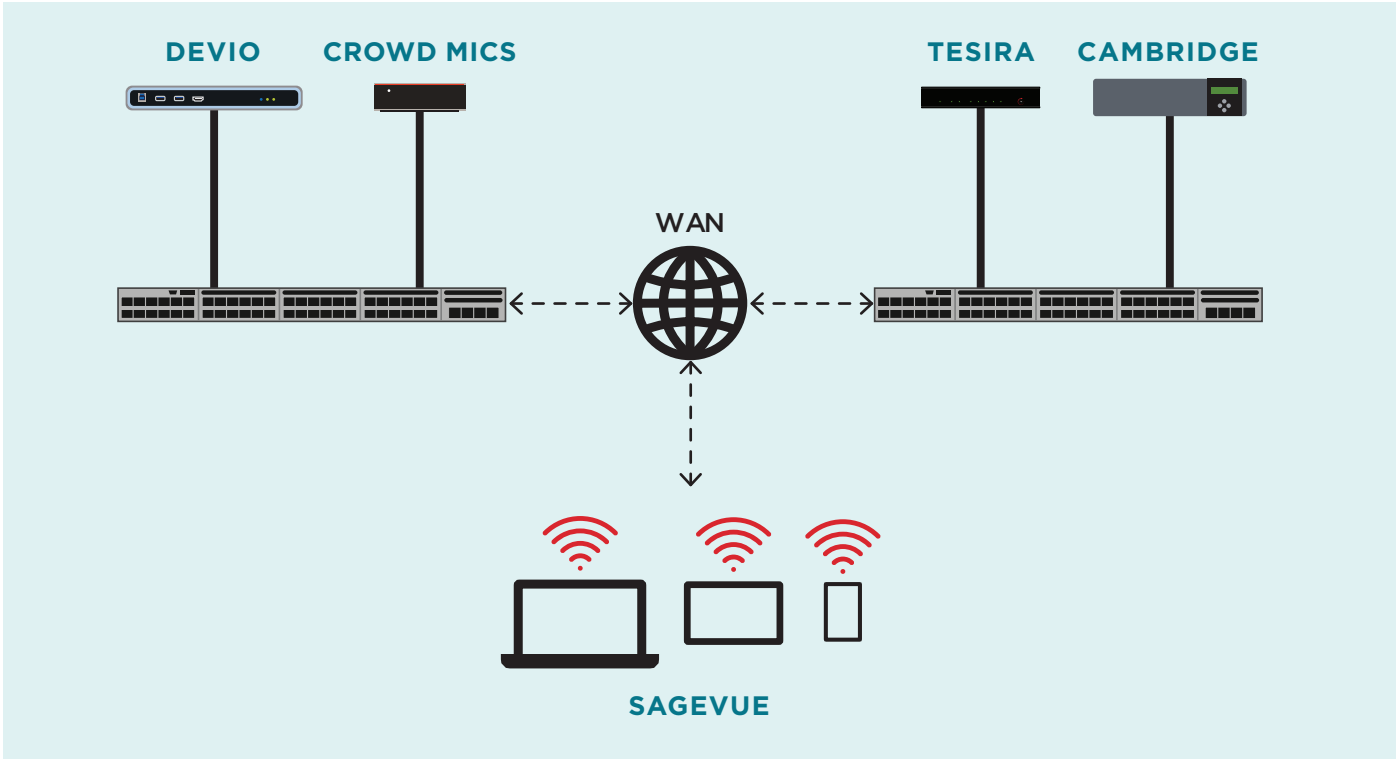
Monitor and Manage Biamp Devices Any Time, Anywhere with SageVue

SageVue is Biamp's browser-based software platform that enables technology managers, integrators, and end users to manage and monitor Biamp devices connected to their network. With SageVue, authorized individuals can review system status and perform administrative tasks.

SageVue intelligently interfaces with LDAP infrastructure, allowing technology managers to use existing accounts and groups to control system access to the software. The platform is also equipped with a full-featured RESTful API, providing the ability to pull information into custom dashboards or third-party monitoring applications.

Best of all, it's available to you at no cost.

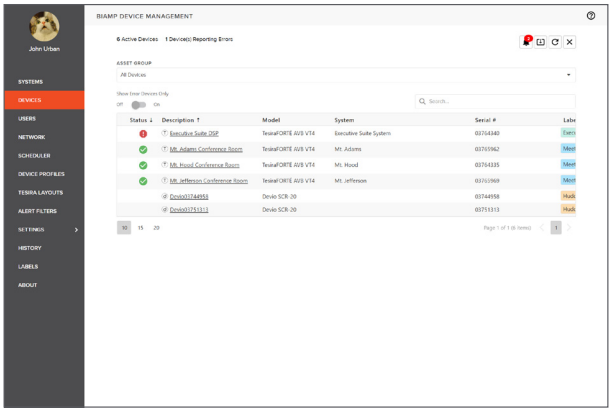


SageVue is the best solution for managing your Biamp devices.
Visit www.biamp.com/sagevue for more information.

MAJOR FEATURES

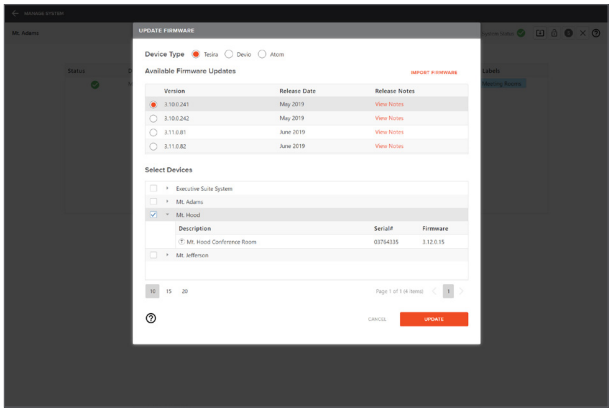
Comprehensive Device List

A single view of all Tesira, Devio, Cambridge, and Crowd Mics devices connected to the network.



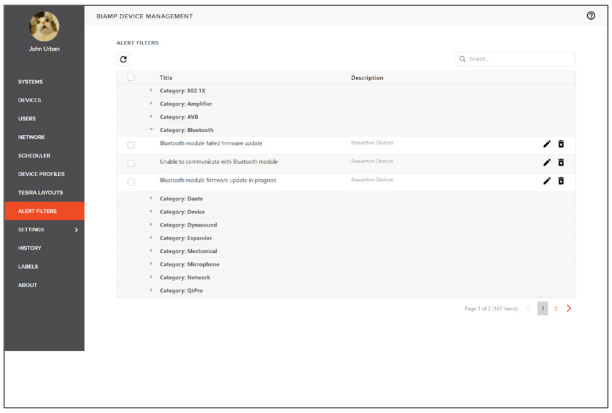
Remote Firmware Updates

SageVue allows users to update firmware remotely, either in groups or on a device-by-device basis



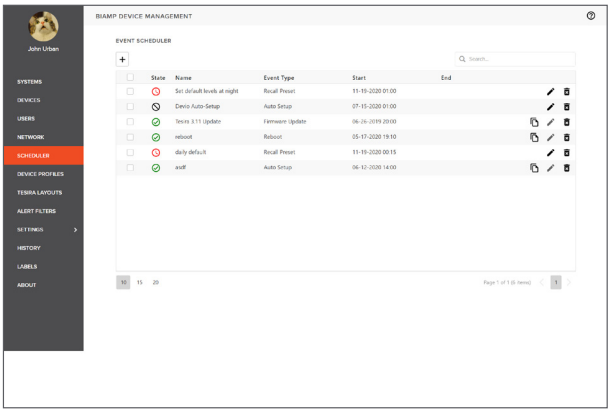
Alert Filters

Customize settings to identify triggers and thresholds for email alerts



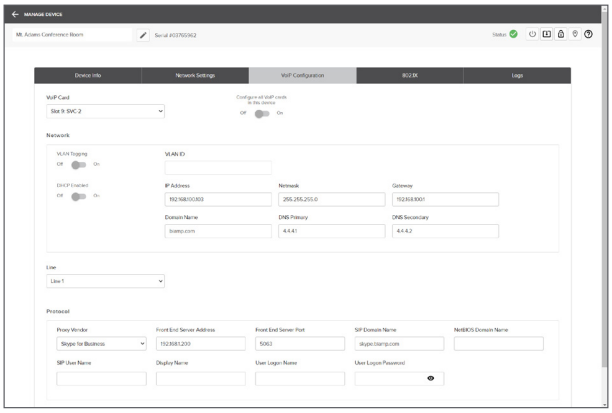
Event Scheduler

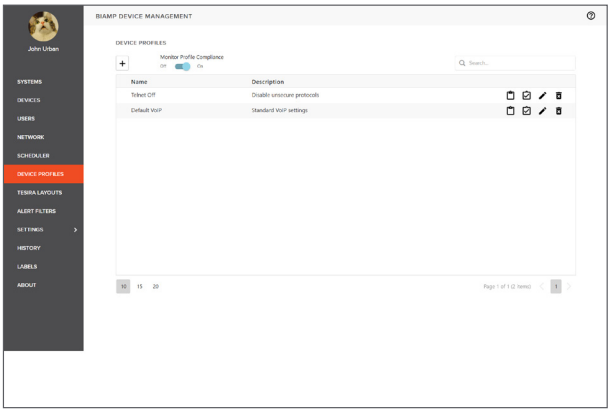
A calendar interface permitting users to set and maintain device schedules for greater efficiency



VoIP Configuration

Enables direct access to VoIP configuration functions of Tesira VoIP-enabled devices



Device Profiles


Establishes standard configurations for specific device types and monitors for variation
